## **Accessibility in the new Master Plan of Campos dos Goytacazes / RJ focusing on public squares in the city**

*Thalita Rosário de Oliveira Moreira, Daniela Bogado Bastos de Oliveira.*

The theme of accessibility concerns the guarantee that people with disabilities or reduced mobility have conditions of use and access to all places, either by their own effort or with the assistance of other individuals. Eliminating barriers that hinder the free movement of people aims to integrate them into life in society, thus guaranteeing their right to the city. In this research, it is proposed to identify how the Campos dos Goytacazes Master Plan - PDCG (Complementary Law No. 0015, of January 7, 2020) seeks to promote accessibility, with regard to architecture and urbanism, focusing on spaces free public spaces for leisure and coexistence and their surroundings. A bibliographic review had been carried out, in order to deepen the knowledge about architecture and urbanism aimed at accessibility, in order to understand its relationship with the issue of the right to the city, of people with disabilities or reduced mobility. In addition, it aimed to verify how the Master Plan of the city of Campos dos Goytacazes aims to put into practice an inclusion policy, as well as the guidelines it uses for this purpose. As a result, it was noted that important actions are planned to be implemented in relation to accessibility in the municipality, such as, for example, the Municipal Accessibility Policy, the preparation of studies and projects for the standardization and adaptation of sidewalks and urban furniture, the installation adequate signage, in addition to the Universal Accessibility Plan. The latter establishes general and specific rules for the adequacy of public transport, public and private spaces, signage and urban furniture, the concept of Universal Design and technical standards. Thus, it is concluded that there are broad guidelines for the promotion of accessibility in the city of Campos dos Goytacazes, based on its Master Plan. The challenge for the city to be more inclusive is to ensure that these guidelines are, in fact, applied. It is up to society to monitor and inspect the fulfillment of the indications made, in order to move towards a society with a better quality of life for all citizens, with all its diversity.
